

Supplementary Materials

Fig. S1. Spearman correlation plot of relevant variables for striped bass collected along the north shore of Massachusetts from 2012–2016. TL_cm = striped bass total length (cm). day = day of year, where January 1st is day 1. d¹⁵N = $\delta^{15}\text{N}$ stable isotopic values. Delta_C = $\delta^{13}\text{C}$ stable isotopic values corrected for lipid content. relK = relative condition factor K. lsi = liver somatic index.
